

High-quality and reliable off-the-shelf rail market data: SCI Verkehr now also offers standard data and time series in its online shop

[29.06.2020] With the new product "Data Compilation", SCI Verkehr is expanding the product range of its online shop, meeting the great customer demand for data that is available at all times and can be used and processed according to individual needs.

Data Compilations are available in Excel format and provide relevant figures transparently and at a glance. They can be individually compiled and combined. Available are:

- Installed bases and age structures
- Market volume and forecasts for new business and the after-sales market
- Market shares of the respective five largest companies
- Rolling stock project lists from 2010

The offer is available for the vehicle types locomotives (diesel and electric locomotives), multiple units/high-speed trains and urban rail (metro and light rail vehicles). Alternatively, world market regions (for all vehicle types) can be selected and combined. Western and Eastern Europe, North and South/Central America and Asia are available for selection. SCI Verkehr also offers a complete package for all eight world market regions and all seven vehicle types.

The basis of a Data Compilation is the renowned and globally unique SCI DATABASE, which is the starting point for almost every consulting service provided by SCI Verkehr. The SCI DATABASE is also used for many other products, such as the MultiClient Studies, which are already available in the SCI Shop. The data for the Data Compilations are updated every six months, and the new market data and forecasts will be available from mid-July.
